WHAT IS R?

Statistical Programming Language

R is an interpreted programming language for statistical computing and graphics. Created by statisticians Ross Ihaka and **R**obert Gentleman and first shared in 1993. It considered to be successor of S language created by AT&T Bell laboratories.

The Comprehensive R Archive Network (**CRAN**) was founded in 1997 by Kurt Hornik and Fritz Leisch to host R's source code, executable files, documentation, and user-created packages.

WHY R?

Great research tool

1. **Free!** Every one can use it and every one can contribute.
2. **Advanced statistical methods.** Not available in other softwares.
3. **Flexible.** Simple calculations or complex data analysis report.
4. **Powerful graphics.** No need to manually edit figures.
5. **Render multiple output formats.** Can be interactive format.
6. **Reproducible Research.** Benefit the entire scientific research community.

... And many more.

HOW TO USE R?

Install R

Installing R

It is straightforward installing R on your machine. Follow these steps:

1. Go to the CRAN (Comprehensive R Archive Network) [R website](#).
2. Choose to download R for Linux, Mac or Windows. Latest version: R-4.5.2 (released on 2025-10-31, [Not] Part in a Rumble).
3. For Windows users, just install 'base' and this will link you to the download file
4. For Mac users, make sure you download the right version for your CPU.

HOW TO USE R?

Install IDE: RStudio

Installing RStudio

R studio is the most popular integrated development environment (IDE) for R. It makes working with R easier, more productive, and organized, especially for new users.

Install steps:

1. Go to the RStudio download website (Posit).
2. Choose the 'Installers for your system' to download
3. Install RStudio as per the instructions.

HOW TO USE R?

Cloud options: Posit
cloud

Posit cloud offers cloud solution to use R, Rstudio without installing on local machine.

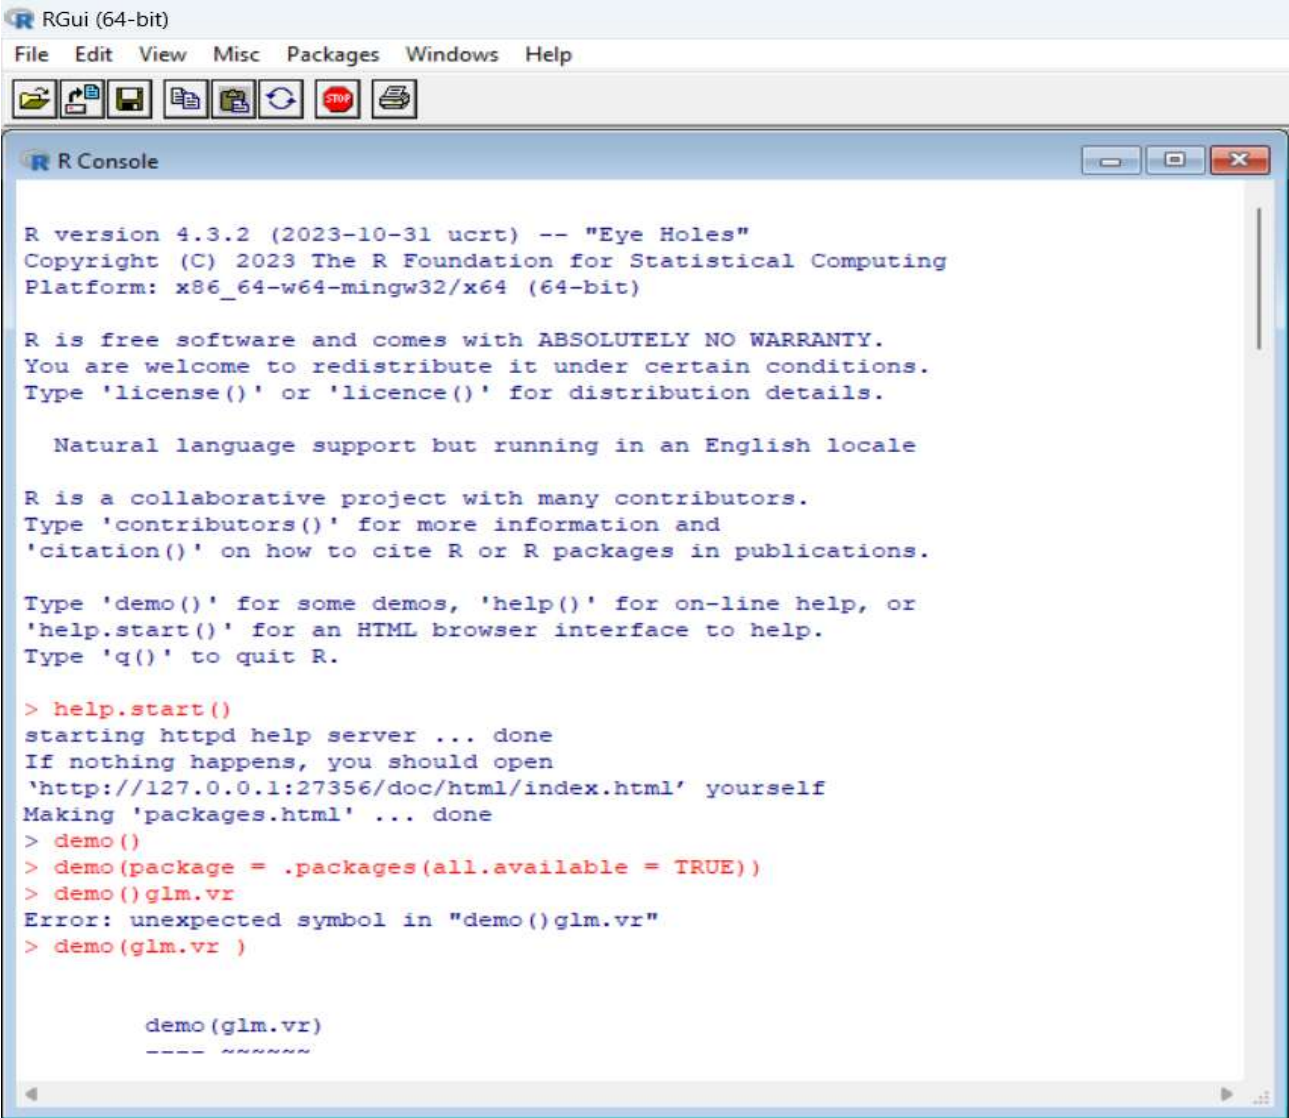

Follow steps:

1. Go to website Posit cloud to register new user/login. Different plans with different limits. Free one limit 25 projects.
2. Create new workspace.
3. Click create new project.

HOW TO USE R?

R GUI

The screenshot shows the RGui (64-bit) window with a menu bar (File, Edit, View, Misc, Packages, Windows, Help) and a toolbar. The R Console window is open, displaying the following text:

```
R version 4.3.2 (2023-10-31 ucrt) -- "Eye Holes"
Copyright (C) 2023 The R Foundation for Statistical Computing
Platform: x86_64-w64-mingw32/x64 (64-bit)

R is free software and comes with ABSOLUTELY NO WARRANTY.
You are welcome to redistribute it under certain conditions.
Type 'license()' or 'licence()' for distribution details.

Natural language support but running in an English locale

R is a collaborative project with many contributors.
Type 'contributors()' for more information and
'citation()' on how to cite R or R packages in publications.

Type 'demo()' for some demos, 'help()' for on-line help, or
'help.start()' for an HTML browser interface to help.
Type 'q()' to quit R.

> help.start()
starting httpd help server ... done
If nothing happens, you should open
'http://127.0.0.1:27356/doc/html/index.html' yourself
Making 'packages.html' ... done
> demo()
> demo(package = .packages(all.available = TRUE))
> demo(glm.vr
Error: unexpected symbol in "demo()glm.vr"
> demo(glm.vr )

demo(glm.vr)

HOW TO USE R?

R studio Layout

Tools>global options to change layout and settings

The screenshot displays the RStudio interface with three main panes highlighted by colored boxes and red text labels:

- Newly created R markdown file**: The Source pane on the left shows a new R Markdown document titled "Intro to R". It contains a title, output format (html_document), date, and several code chunks. The first chunk is an R setup chunk, and the second is an R Markdown chunk. The third chunk is an R code chunk that generates a summary of the 'cars' dataset. The fourth chunk is an R code chunk that generates a plot of 'pressure'.
- Console**: The Console pane on the right shows the R version (4.3.1) and the R Foundation copyright notice. It also displays the output of the first code chunk, which is a summary of the 'cars' dataset.
- Files/Environment**: The Environment pane at the bottom right shows the current environment, which is empty. The Files pane at the bottom left shows the current directory structure.

The History pane at the bottom left shows the execution history of the code chunks, including the generation of the 'cars' dataset and the 'pressure' plot.

HOW TO USE R?

Some concepts

- **Packages.** a collection of functions, documentation, and data.
`install.packages(pkgnames), library(pkgnames)`
- **Functions.** Get things done (outputs). Eg, `mean()`, `sd()`, inputs of functions called arguments
- **Object-oriented programming.** The output can be used as input,
Assignment: `<-` (alt+-)
- **Case sensitivity.** It treats great and Great differently. `class()` or `typeof()`
- **Data types.** numeric(real or decimal), integer, character, complex, and logical.
- **Data structures.** Vector, matrix, factor, list, data frame. `class()`

HOW TO USE R?

Good practices

- **Start with a clean environment.** Recommend to create a project, do not use `setwd()`.
- **Consistent coding style.** Google's R Style Guide. Eg: name convention(not start with number), indentation, etc.
- **Comment the code.** Literate programming. code is explained. Comment starts with `#`
- **Use pipe** `|>`.
- **Use shortcut keys.** Tools → Keyboard Shortcuts Help or Alt + Shift + K.
`alt+enter`: run code. `Ctrl+alt+i:insert`: chunk. `Ctrl+shift+M`: `|>`.
- **help(functionname) or ?functionname.** Get information of any specific named function
- **Github.** Version control is a time machine.
- **Rmarkdown or Quarto.** Updates!!!! and many more...

DATA PREPARATION

This class assume we all have clean data, which means the data is ready for analysis.

- Do not underestimate the time for data preparation. Often than not most of the time will be spent here.
- Tidy data concept. Please refer to Wickham 2014. 3 Features of **tidy data**:
 - 1.Each variable form a column.
 - 2.Each observation forms a row
 - 3.Each type of observational unit forms a table.
- package tidyverse is a great help.

DATA PREPARATION

TIDY DATA: THE FOUNDATION OF ROBUST ANALYSIS

MESSY DATA

	Blood Pressure (Day 1)		Blood Pressure (Day 7)	
Patient ID	Systolic		Diastolic	
Smith, J.	140/90		135/88	
	160/100		150/95	
Jones, A.	160/100		150/95	
Drug X				
Group B	Dose: 10mg			

Problems: Variables in column names, multiple variables in one cell, values are mixed with metadata.

TIDY DATA

Patient_ID	Day	BP_Systolic
		90
Smith_J.	Day 1	140
Jones, A.	160	135
Jones, A.	165	150
BP_Systolic	90	95

Principles: 1. Each variable is a column.
2. Each observation is a row.
3. Each cell is a single value.
Ready for analysis!

INITIAL DATA ANALYSIS (IDA)

IDA primarily ensures transparency and integrity of preconditions to conduct appropriate statistical analyses in a responsible manner to answer predefined research questions [1]. It includes metadata setup, **data cleaning**, data screening, Documentation and initial data reporting, Refining and updating the statistical analysis plan [2].

Data screening is related to descriptive statistics. It includes:

1. Distribution of single variables.
2. Missing data.
3. Association between variables.

Acute Bacterial Meningitis Dataset:

I will use ABM dataset to demonstrate descriptive data analysis. Please use own clean dataset to follow along.

We will move to rstudio workspace.
